Picket Fencing

The traditional look of the past, using the materials of the future.

Everyone loves a picket fence—except when it comes to repainting.

Now you can have the look—without the maintenance—by using recycled-plastic pickets from Replas.

Our recycled-plastic pickets are sturdy, stylish and ultra-low maintenance. They are available as individual components or assembled into 2.4 metre wide panels with standard heights of 1.2 m, 0.8 m or 0.6 m—other heights on request. Gate and posts are also available.

- An elegant yet strong fencing solution
- Low maintenance
- 15 year warranty on pickets
- Fast and easy installation
- Will not rot or need painting
- Pre-assembled panels

The strength and durability is achieved using solid UV-stabilised polypropylene pickets that are securely fastened to galvanised and powder coated steel rails, which are in turn attached to galvanised and powder coated steel posts.

NEW SPIN ON AN OLD FAVOURITE

Nothing says tradition like cricket and what better complement to a cricket oval than a traditional white picket fence.

Manly Cricket Oval has been transformed with the installation of four new environmentally- friendly light towers and a brand new picket fence from Replas. The 420-metre fence consists of 160 x 2.4-metre plastic panels supported by recycled-plastic square bollards.

Not only was plastic fencing the best choice from a low maintenance perspective, but it was also an excellent environmental choice.

'We all know that Manly Oval is one of the best grounds in Sydney. And now with the beautiful white picket fence surrounding it and these new lights shining from above, it simply looks spectacular.'
Councillor Jean Hay, Mayor of Manly.

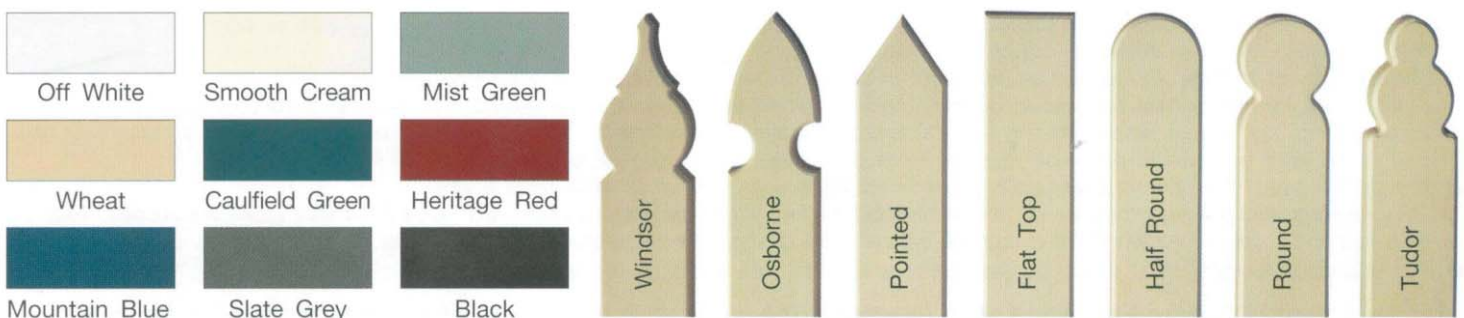

The Adelaide Oval was recently redeveloped with the installation of 2000 plastic pickets at the new members stand. They were customised to match the size of the pickets of the existing fence.

Installation time was halved as the original pickets needed two screws at the top and bottom while the new ones only needed one. White tipped screws blend in beautifully with the clean look of the new fence.

'Timber pickets, over the years needed to be replaced and painted.'
Now there will be, 'No need to attend to picket issues for a long time.'
David Lennon -Maintenance Supervisor, SACA.

A range of colours and styles are available with custom gate and panels made to order.
